

## Cigss Thin Film Solar Cells

Filesize: 8.78 MB

### ***Reviews***

*The publication is great and fantastic. It is probably the most remarkable book i actually have read through. Its been printed in an exceedingly easy way and it is merely right after i finished reading through this publication where in fact altered me, modify the way i think.*

## CIGSS THIN FILM SOLAR CELLS

To get **Cigss Thin Film Solar Cells** PDF, make sure you follow the link listed below and save the ebook or have accessibility to additional information which are in conjunction with CIGSS THIN FILM SOLAR CELLS book.

Bibliogov, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This report describes the I-III-VI<sub>2</sub> compounds that are developing into a promising material to meet the energy requirement of the world. CuInSe<sub>2</sub> (CIS) and its alloy with Ga and S have shown long-term stability and highest conversion efficiency of 19.5 . Among the various ways of preparing CuIn<sub>1-x</sub>Ga<sub>x</sub>Se<sub>2-y</sub>S<sub>y</sub> (CIGSS)/CdS thin-film solar cells, co-evaporation and sputtering techniques are the most promising. Sputtering is an established process for very high-throughput manufacturing. ARCO Solar, now Shell Solar, pioneered the work in CIS using the sputtering technique. The two-stage process developed by ARCO Solar involved sputtering of a copper and indium layer on molybdenum-coated glass as the first step. In the second step, the copper-indium layers were exposed to a selenium-bearing gas such as hydrogen selenide (H<sub>2</sub>Se) mixed with argon. The hydrogen selenide breaks down and leaves selenium, which reacts and mixes with the copper and indium in such a way to produce very high-quality CIS absorber layer. Sputtering technology has the added advantage of being easily scaled up and promotes roll-to-roll production on flexible substrates. Preliminary experiments were carried out. ZnO/ZnO: Al deposition by RF magnetron sputtering and CdS deposition by chemical-bath deposition are being carried out on a routine basis.
