

Cellular Function and Metabolism

Filesize: 6.36 MB

Reviews

Extensive guide! Its this sort of very good study. It is actually full of knowledge and wisdom I found out this pdf from my i and dad suggested this ebook to understand.

Book Condition: New. Publisher/Verlag: Springer, Berlin | A variety of metabolic processes are known to be intimately involved in the maintenance of cellular structure and function. It has also become clear that metabolic events involved in the synthesis and hydrolysis of ATP as well as for the synthesis of proteins and phospholipids are essential for cellular health. The regulation of cell function is generally achieved through participation of a wide variety of hormones and different signal transduction mechanisms for the activation/deactivation of some specific metabolic processes. In this regard cyclic AMP and calcium seem to play a crucial role. Various hormones are also known to affect the genetic machinery of all the cell; however, the exact signals for genetic control of cellular function are not well defined. In particular, the sequence of events concerned with remodelling of different types of cells under various pathological situations is poorly understood. In this book we have therefore dealt with some of these issues from biochemical, molecular biological, physiological, and pharmacological viewpoints. Special emphasis has been laid on understanding heart function and metabolism in health and disease in general, and cardiac hypertrophy, heart failure, and ischemic heart disease in particular. It is hoped that this multidisciplinary information will be of value to basic scientists and clinical investigators. | Preface.- Control of growth in neonatal pig hearts.- Role of protein kinase system in the signal transduction of stretch-mediated protooncogene expression and hypertrophy of cardiac myocytes.- Growth factor for cardiac hypertrophy.- Effect of angiotensin converting enzyme inhibitor on regression in cardiac hypertrophy.- Differing responses of G2-related genes during differentiation of HL60 cells induced by TPA or DMSO.- Mechanistic effects of kijimicin on inhibition of human immunodeficiency virus replication.- Function and energy metabolism of isolated hearts obtained from hyperthyroid spontaneously hypertensive rats (SHR). A 3lp-nuclear magnetic resonance...
