

Optimizing the performance of microstrip filters

By Maher ahmed

LAP Lambert Academic Publishing Jul 2012, 2012. Taschenbuch. Book Condition: Neu. 220x150x9 mm. This item is printed on demand - Print on Demand Neuware - if you read this book you will explore the design procedures for microwave microstrip and metamaterial filters. A suggested design approach for designing UWB microstrip bandpass filter based on using both open and short ended stubs is introduced. Using the suggested design approach a bandwidth of approximately 10GHz can be achieved with the proposed simple topology which is more than what was fixed by Federal Communication Commission (FCC) for UWB radio systems. Moreover, a filter constituted was also designed and fabricated. this book explains the theory behind metamaterial transmission lines, and how these lines can be employed in filter design. it presents a suggested design methodology for designing microwave narrowband and ultra-wideband filters based on metamaterial transmission line CL-loaded approach. The unit cell used in the design is the composite right left handed (CRLH) transmission line cell, which consists of series interdigital capacitor and shunt short circuit stub inductor. the book shows how this metamaterial cell can be employed to design narrowband, and ultra-wideband bandpass filters as well. 152 pp. Englisch.

Reviews

Good eBook and helpful one. It really is written in straightforward words and phrases and never confusing. I am just effortlessly could possibly get a enjoyment of looking at a published book.

-- **Romaine Rippin**

The book is great and fantastic. it absolutely was written very properly and beneficial. It is extremely difficult to leave it before concluding, once you begin to read the book.
