

Demonstrations of diseases in the chest, and their physical diagnosis

By Horace Dobell

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 50 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1858 edition. Excerpt: . . . Auscultation. Respiratory murmur weak or suppressed in the affected parts, exaggerated in the neighbourhood and in the opposite lung. Vocal resonance somewhat increased when exudation has commenced. Fine crepitation on deep inspiration, especially after cough, persistent after expectoration. It may be masked by the rhonchus, sibilus, or large crepitation of bronchitis, but with care may generally be caught at the end of a deep sighing inspiration. Cough moderate, rarely paroxysmal. Sputa sanguinolent or rusty, viscid, semi-transparent, adhesive, slightly aerated. The tint may vary, --occasionally liquorice, or prune-juice colour, or watery, brown, or blackish, --in rare cases only white and viscid, --more rarely absent. Note. --Acute (edema Op The Lung presents the physical signs of fig. 6, except that the crepitation is less fine. Sputa not sanguinolent, but watery or muco-purulent. Figure 7. Second Stage Of Pneumonia (ked Hepatisation), traversed by pervious bronchi. Signs...
